Targeted Coding and Revenue Enhancement Analytics and Services (n*CREAS*)

Are you charged with improving the organization's bottom line? Are you a CFO, CDI, HIM, or Revenue Cycle leader interested in ensuring the best possible return on investment for the service you deliver? If so, **JTS can help you.**

Targeted Coding and Revenue Enhancement Analytics and Services (nCREAS) target specific kinds of coding to assess the extent to which revenue is lost to incomplete or inaccurate coding. JTS then works with you to create the following:

- A road map for reducing lost revenue caused by incomplete or inaccurate coding;

- Resources (as needed) to retrospectively correct coding and rebill third party payers;

- A means to concurrently find and correct coding and billing errors;

- A program through which coders, CDI and clinical staff learn where to focus energy for improved documentation quality, improved patient care, and enhanced revenue.

Typical Coding Audits

Hospitals typically audit coding to make sure it is accurate, complete and compliant with national correct coding guidelines. Audits are usually retrospective and often focus on high volume diagnoses, procedures or Diagnosis Related Groups (DRGs). Audits may also include a random sample of inpatient and outpatient coding.

Coding audits are a valuable tool for educating coders, and improving coding quality and compliance. The sample sizes, however, are normally insufficient to identify patterns of problems that result in lost revenue. That's where **JTS** can help.

JTS's Solutions:

- Increase revenues;

- Ensure more accurate, complete and compliant coding;

- Provide a more complete picture as to the quality and return on investment from offshore, onshore or in-house coding services;

- Identify coding and revenue gaps that may have occurred as a result of the migration from ICD 9 to ICD 10; and

- Enable a clearer path through which clinicians and CDI staff can improve documentation and facilitate better coding and more appropriate reimbursement.

Let our team of RHIAs, RHITs, certified coders, and a practicing physician (who is also a certified coder) help you.

About JTS Health Partners

JTS Health Partners is a national healthcare and advisory professional services firm. The firm's consulting portfolio is focused on enterprise planning, health information management, revenue cycle management (including back-office functions), information technology, as well as financial and operational performance improvement initiatives for hospitals and physicians. Other professional services include staff augmentation for the acute setting.

JTS remains very focused on providing our clients with tremendous value and service levels. Our trademark is serving in the role of trusted advisor to our clients, ensuring their outcomes and satisfaction with JTS services.
